

Series: EPT1 • EPT2

Precision Interchangeable Thermistors

EI Sensor's Precision Interchangeable Thermistors are highly accurate, extremely stable epoxy coated devices used throughout many industries including Medical Electronics, Instrumentation, HVAC/R and Consumer Electronics.

“Interchangeable” refers to the ability to replace one thermistor with another without the need for costly individual calibration. The sensors provide precision accuracy of $\pm 0.2^{\circ}\text{C}$, $\pm 0.5^{\circ}\text{C}$ and $\pm 1.0^{\circ}\text{C}$ over wide temperature ranges and are available with insulated or un-insulated lead wires.

Our team can assist with any customizing needed to electrical and physical characteristics of these devices.
